Plastic Crates

Icon Key

 **Stacking Crates** are designed to sit securely on top of each other when full, helping you maximise vertical storage space.

 **Nesting Empty** crates fit inside one another, which reduces space during storage and transport.

 **Inter-locking** crates securely connect with each other, ensuring stability and preventing slipping or shifting during stacking, and transporting.

 **Dimensions** All measurements are in millimeters (mm).

Format: **Length x Width x Height**
Eg 600 x 400 200

Shelving Store
Shelving & Storage Solutions

087 630 1800
info@shelvingstore.co.za
www.shelvingstore.co.za

Our plastic crates deliver reliable performance in demanding environments, from warehousing to retail and food service. They handle heavy loads, repeated stacking, and daily use with ease.

Colours

Our standard colours are; black, grey, red, green, and blue, these crates also offer custom colour options on request, helping you match your brand or organise operations more effectively.

Virgin Plastics

Manufactured from brand-new materials, virgin plastics are perfect for scenarios requiring the highest standards of quality and performance.

These crates excel in cold storage or freezer environments, as they are highly resistant to low temperatures. Additionally, virgin plastics provide uniform colouring, ensuring consistency across product batches—a critical feature for maintaining a professional appearance.

Re-ground Plastics:

Made from recycled materials, re-ground plastics offer a sustainable and environmentally friendly option without compromising on durability.

These crates are ideal for businesses prioritising eco-conscious practices while still demanding high performance.

Re-ground crates are not recommended for food or medical products.

HDPE vs PP Plastic Crates

HDPE (High-Density Polyethylene): HDPE crates are tough, durable, and highly impact-resistant.

They resist cracking and perform well in sub-zero environments, which makes them ideal for cold storage, food handling, and heavy-duty applications.

They handle heavy loads well and perform reliably in demanding environments such as warehouses and industrial applications.

PP (Polypropylene): PP crates are lighter and more rigid, giving them a clean and structured shape.

They perform well in higher temperature environments and resist heat better than HDPE.

They are ideal for general storage, retail displays, and lighter-duty use where appearance and easy handling matter.

Sub-Zero Temperature Use

The snowflake icon indicates crates commonly used in sub-zero environments. This being said, most crates that are made from virgin plastics can be used in freezers.

Crates manufactured from regrind plastic are not recommended for sub-zero temperatures, as the material may become brittle.

Plastic crates should not be exposed to temperatures below -20°C .

The Hinged-Lid container range is designed to assist in the management and distribution of high value goods.

The Hinged-Lid products are particularly durable and are moulded in super tough polypropylene with strong, secure hinges.

These containers discourage tampering as they support a variety of security seals and keep valuable items hidden from view.

Colours

- ✓ Black
- ✓ Grey
- ✓ Red
- ✓ Blue

Features

- ✓ Stackable, nest-able compatible with dollies.
- ✓ Secure enough for heavy-duty transit.
- ✓ Flat base makes them suitable for all types of conveyors.
- ✓ If the lid is broken externally, the cutoff piece falls inside, giving extra internal security.
- ✓ Fully Recyclable
