Shelving & Storage Solutions

HEAVY DUTY SHELVING

Heavy Duty Shelving units have been designed to provide a quick low-cost solution for the storage of heavier products which conventional shelving cannot offer, this is done by taking advantage of a modular principal which helps reduce time and higher costs, which are often associated with racking.

The frame is made from galvanised steel with the option of either; galvanised steel decking, shutter-board decking or open / closed timber decking. The galvanised decking offers easy cleaning and no maintenance, whereas the shutter-board and timber decking offer a more cost-effective solution. All timber is supplied raw, and can be either painted, varnished, or left raw, dependent on the end users' requirements.

This product also takes advantage of the Starter / Add-on Bay process, which further adds further savings on storage straight runs (units next to each other).

Heavy Duty Shelving is well suited for use in garages in homes and other light duty industrial storage solutions, offering a more robust solution to conventional shelving.

Standard Specifications

Configuration: Starter Bay or Add on Bay		
Number of Tiers / Decks: 3 or 4 or 5		
Frame Material: Galvansed Steel		
Shelf / Decking Material:	<i>Galvanised Steel:</i>	UDL of 300 Kg Per Deck / Shelf
	<i>Timber MDF / Shutterboard:</i>	Between 180 Kg to 300 Kg, dependent on thickness & quality
	<i>None:</i>	Can be supplied without decking.
Unit Weight Capacity: 800 Kg Per Unit		
Height: 1830mm / 2134mm / 2400mm		
Width: 900mm / 1225mm		
Depth: 300mm / 450mm / 600mm / 900mm		

We can also customise sizes to your specific requirements
